Clinical Test Facility at The Intervention Centre

Welcome to the Test Facility

To meet the needs of industries in the private sector for simplified access to hospitals for product development and testing we have established an open commercial test facility. The test facility is administered by Section for Method Development and Industry Collaboration (SMI). SMI operates as a formal partner for external companies. We organize and administrate clinical or technological projects on commercial terms at Oslo University Hospital. The test facility can deliver a broad spectrum of services that cover the whole innovation process from early phase evaluation and testing to structured preclinical or clinical trials.

Examples of services we offer:

- Get connected to experts:** Consulting, Education, Conceptual evaluation
- Testing & Documentation:** Device testing, Technical Lab testing
- Perform studies testing:** Preclinical studies, Investigator Sponsored Studies, First in Man studies, Clinical trials, Multicenter research, Research collaboration

If you have plans for a project together with us please create an account in our web based innovation community, [sign in](#) and submit an inquiry describing your product and the type of service you are looking for.
